New Heavy Duty Cantilever Racking System Launched

Responding to market demands, Dexion has launched a new version of its Heavy Duty Cantilever Racking System, Clearspan.

Technical Services GM, Seamus Redmond, takes up the story.

“We’ve had a gap in the product range for some time now so this new HD Clearspan will be good news for our customers”, he said. “We expect the product to be a real winner because it hits the mark in terms of load carrying capacity, range of sizes and, best of all, its very attractive price. Clearspan is perfect for storing very long items.”

Three standard heights are available using 3,000mm, 4,500mm and 6,000mm columns. Columns can be

placed at 900mm, 1,200mm, 1,500mm, 1,800mm and 2,100mm centres. The horizontal load bearing arms are pinned in position on the column assembly and are available in three standard lengths of 600mm, 900mm and 1,200mm.

“There are also a couple of really neat accessories in the range, said Redmond. “Deck Support Brackets accommodate either Mesh or Particleboard Decks, allowing the storage of different length items. There are also Tube Support Channels that act as a cradle for long lengths of tube. The channels stop material bending and sagging and allow easier loading and unloading of the Clearspan system”, he said.
