A complete range of door finishes and fittings means StorWall can be configured to suit any environment and any budget.

StorWall

New StorWall - The Smart Alternative to Joinery

Now there is a competitively priced, purpose-designed, smart alternative to joinery when it comes to floor-to-ceiling filing and storage. Dexion's award-winning StorWall system has been completely re-designed.

New StorWall combines all the great ideas in door styles, finishes and fittings with the benefits that come with a steel carcass and a complete range of matched filing and storage accessories.

All of the original StorWall features are still evident in the new system – fully demountable allowing relocation or reconfiguration; building features such as columns, wall protrusions and services, can be covered by panels or access doors; and, the internal fittings

are interchangeable with other Dexion shelving systems and cabinets. New StorWall is designed and manufactured in Australia by Dexion and has far less parts than the original StorWall system. It incorporates a cleverly designed steel carcass that dramatically speeds up installation time, and even allows pre-assembly off-site. These improvements have dramatically reduced prices.

New StorWall really is flexible filing and storage furniture. The all-new modular design makes the system simple to specify, and you can design StorWall to suit any budget using different door styles, finishes, fittings and accessories.

And to speed-up the process even

further Dexion's in-house designers use a new software package to quickly provide a customised solution.

The new design of the system also provides a look that is classy and contemporary. To top things off, a complete range of accessories ensures StorWall is a durable and effective filing and storage system, not just a cupboard.

That's why we say new StorWall is the smart alternative to joinery.

Talk to the team and learn more about new StorWall today. You won't be disappointed.
