

Side2Side

transform under utilised space

Side2Side is the ideal Compactus® for transforming under utilised areas into efficient storage space. It's simple really! We just place a row of mobile shelving in front of a row of static shelving.

Storage for Unconventional Space

Side2Side turns the most unconventional areas into unique and productive storage spaces. Side2Side is perfect for alcoves, narrow spaces and unusually shaped rooms.

More Pick Faces

Side2Side also provides more "pick-faces" and faster access to stored items than conventional Compactus® units.

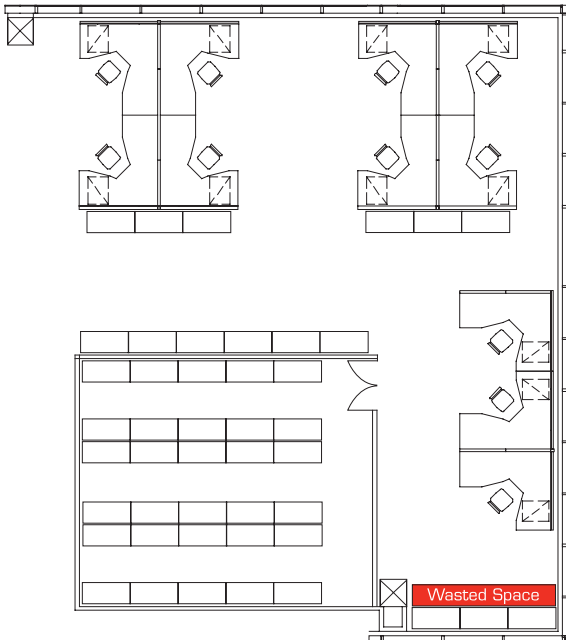

Greater access at any one time

Increase Productivity & Efficiency

Increase productivity and efficiency by locating more materials closer to the point-of-use. Side2Side eliminates the need for permanent aisles, as all materials are accessed from the front of the unit, converting precious floor space to storage space. By simply placing a row of mobile units in front of the existing Static Shelving, it has improved the storage in this example by 66%.

BEFORE - Static Shelving

AFTER - Side2Side
